

Luxolo Ndimma

MERN Stack Developer
Cape Town, South Africa

✉ luxolondima41@gmail.com | 🔗 linkedin.com/in/luxolo-ndima
☎ 084 328 9893

PROFESSIONAL SUMMARY

Full Stack Developer with 4+ years of experience building scalable web applications using JavaScript/TypeScript, React, Node.js, Python, and SQL databases. Experienced in designing RESTful APIs, developing microservices architectures, optimizing relational databases, and deploying containerized applications using Docker and Kubernetes. Strong exposure to CI/CD pipelines, cloud-ready deployments, and data processing workflows, with growing involvement in AI-integrated systems and automation. Comfortable working in Agile environments and collaborating cross functionally to deliver production-ready solutions.

TECHNICAL SKILLS

Frontend

- React.js, Redux Toolkit, Next.js
- JavaScript (ES6+), TypeScript
- Tailwind CSS, Responsive UI Development

Backend

- Node.js, Express.js
- Python (Flask, Django)
- Entity Framework
- REST API Design & Integration
- Authentication & Authorization (JWT-based systems)

Databases

- MySQL
- PostgreSQL
- MongoDB
- Query Optimization & Indexing Strategies

Cloud & DevOps

- Docker (Containerization)
- Kubernetes (Orchestration)
- CI/CD Pipelines
- Nginx
- Redis
- Git (GitHub, Bitbucket)

Data & Automation

- Background Job Processing (BullJS, Redis)
- Web Scraping & Data Processing
- API Integrations
- Performance Tuning

PROFESSIONAL EXPERIENCE

Desktop Support Technician at Cape Peninsula University of Technology

2018 – 2019 | Cape Town, South Africa

Description

- Provided technical support to 200+ staff and students across multiple faculties, resolving an average of 15+ tickets per week for hardware repairs, software installations, network connectivity issues, and account setups via ServiceNow and Jira ticketing systems.
- Imaged and deployed 100+ machines for a major lab refresh, ensuring seamless system transitions and minimizing downtime across departments.
- Developed a custom inventory management, checkout, and pricing system for the Electrical Engineering department's electronics component shop using Java (frontend and backend) and MySQL, reducing stock tracking errors and saving staff time.

- Utilized remote desktop tools and Microsoft Workspace to diagnose and resolve technical issues efficiently, maintaining high user satisfaction and receiving consistent positive feedback from supervisors.

Intermediate React Developer at Condorgreen Infotech

2021 – 2024 | Cape Town, South Africa

Data Engine

Technologies: ReactJS, MySQL, JavaScript, Typescript, HTML, CSS, Figma

Description

- Designed and developed full-stack applications using React (Hooks, Context API), TypeScript, and Node.js, implementing responsive web design, HTML/CSS/TailwindCSS, and cross-browser compatibility while maintaining RESTful APIs for enterprise-level systems.
- Built and maintained RESTful APIs consumed by internal and enterprise systems, ensuring reliable data flow and integration across platforms.
- Contributed to a high-performance data engine deployed at Vodacom, supporting critical data processing and analytics workloads.
- Optimized complex SQL queries (MySQL/PostgreSQL), improving API response times by approximately 30% and enhancing overall application performance.
- Implemented background task queues using BullJS and Redis to improve system reliability and handle asynchronous workloads efficiently.
- Containerized services using Docker and deployed scalable applications on Kubernetes, supporting cloud-ready deployments on AWS and Azure.
- Developed a worker service to detect anomalies using cron jobs, automatically sending targeted email notifications and reducing manual monitoring effort.
- Improved code quality and reduced bug rates by implementing unit tests (Jest) and enforcing structured code reviews within Agile sprints.
- Maintained a full-stack internal web application used company-wide by employees to log and track daily and weekly work activities.
- Collaborated in Agile cross-functional teams with Business Analysts, QA engineers, designers, and product stakeholders to deliver production-ready solutions.

Employee Time Tracking & Weekly Activity System (In-house Project)

Technologies: MySQL, JavaScript, HTML, CSS

Description:

- Developed a full-stack internal web application used by employees to log and track daily and weekly work activities.
- Implemented backend logic using ASP.NET MVC and .NET Core with Entity Framework for ORM and database interaction.
- Designed and maintained MySQL database schemas for employee records and activity logs.
- Built responsive UI components for capturing and viewing weekly time entries.
- Contributed to system enhancements and performance improvements in collaboration with internal teams.
- Implemented validation and business rules to ensure accurate time capture and reporting.
- Assisted with deployment and maintenance of the application in a production environment.

Intermediate Backend Developer at Jenny Internet

2024 – Present | Cape Town, South Africa

Description:

- Develop and maintain PHP-based web applications.
- Use PHP Data Objects (PDO) to connect PHP applications to the database.
- Write and maintain SQL queries for retrieving, inserting, updating, and deleting data.
- Implement CRUD functionality using PHP and PDO.
- Work with MySQL databases, including database queries and data management.
- Building backend functionality that connected frontend interfaces to database-driven systems.
- Troubleshoot and fix PHP application and database-related issues.
- Maintain and enhance existing PHP applications based on business requirements.
- Apply prepared statements through PDO for safer database queries and parameter handling.

SELECTED PROJECT EXPERIENCE

Microservices & Task Automation Platform

- Architected Node.js services with asynchronous task processing.
- Implemented retry logic and failure handling using Redis-backed queues.
- Designed clean API contracts between services.

React + Django API Platform

- Developed React frontend integrated with Django REST APIs.
- Implemented state management and modular UI architecture.
- Applied performance optimizations and lazy loading strategies.

Data Processing Tool

- Built backend pipelines to scrape and process structured match data.
- Implemented statistical modelling logic for predictive outputs.
- Structured modular backend services for extensibility.

Containerized Deployments

- Configured Docker images for backend and frontend services.
- Managed service orchestration using Kubernetes.
- Configured Nginx for routing and load balancing.

EDUCATION & CERTIFICATIONS

Intlanganiso Senior Secondary School – Cape Town, South Africa

Grade 12 (2012 - 2016)

Cape Peninsula University of Technology – Cape Town, South Africa

2017 (Incomplete – WIL Submission)

CTU Training Solutions – Cape Town, South Africa

Higher Certificate: IT: Systems Development

2021 – 2022

Udemy Courses – Online

Microservices with React and Node.js.

2023

Continuous Learning – Online

Regularly upskilling in DevOps, AI, and advanced JavaScript frameworks.
Present

TOOLS & PLATFORMS

- VS Code, Postman, Nginx, Redis, MySQL, MongoDB, Docker, Kubernetes

SOFT SKILLS

- Analytical problem-solving.
- Strong communication skills.
- Agile & Scrum Collaboration.
- Ownership mindset.
- Performance-driven development.

PERSONAL INTERESTS

- AI & Automation.
- Future of Technology & Conspiracy Theories.
- Counterterrorism Series & Video Games.
